

# 52VIKING POS Designer

Browser-based drag-and-drop design of web user interfaces for 52VIKING points of sale (POSs)

**Design your POS user interfaces to support all the workflows your organization needs for:**

- Stationary and mobile POSs
- Every size of display (16:9 screens, 4:3 screens, tablets, mobiles)
- Every type of POS (staffed checkouts, self-service checkouts (SCOs), information desks, customer-facing displays, unmanned stores, etc.)
- Every role in your stores (shop assistants, fixed and floating operators, supervisors, managers, etc.)
- Every chain in your organization
- Every country/language that your organization operates in

# Be in complete control of your POS UI design

## Designing is this easy

Drag the required UI component, for example a button, a menu, or a keypad, onto the required position on your layout. Specify its properties (size, color, text, action, etc.) and save. Repeat until you're happy with your POS layout.

Combine different layouts to make them work together, transparently and intuitively, to support all of your organization's workflows: Logging in, selling articles, taking payment, handling returns, onboarding customers, completing cash statements, etc. Your staff and customers simply get the features they need in any given situation.

Choose between more than 60 different UI components, including advanced components such as:

- *View group* with 'PLU buttons' for selling articles without barcodes or bulky articles that are difficult to scan
- *Video player* that's typically used for displaying playlists of advertising videos on customer-facing layouts
- *Monitoring* that lets supervisors monitor actions that take place on other tills, for example self-scanning tills that you want to keep an eye on
- *Cash statement* that helps operators quickly count cash – even across currencies – and automatically calculates the total amount
- *Notifications* that can inform users about anything from network status to customer age requirements.

## Mobile POS-ready

Organize busy layouts with tabs, carousels, or collapsible side menus for users to easily access all POS features even on small displays.

## Customize your organization's look, feel, and languages

Add your own logos, images, icons, styles, colors, fonts, scripts, etc. In multilanguage environments, you can easily handle translations of language versions in 52ViKING POS Designer itself, or you can export/import language files to/from your preferred translation agency.

## Publish easily

Publish your new or updated POS UI designs directly from 52ViKING POS Designer to your preview, test, or production environments.

### TECHNICAL REQUIREMENTS

- Standard browser
- Minimum 1024×768 px display (full HD (1920×1080 px) recommended)
